

## Building a sustainable future for Asia!

Environmental preservation and sustainability have become global priorities as countries seek better practices for a greener future. The ASEAN region are currently experiencing rapid economic growth and urbanization, waste generation has become a pressing concern.

Therefore, many countries are actively striving to create a cleaner and greener environment for their citizens and future generations. Despite the challenges, ongoing efforts in waste management have made meaningful strides. Many of these countries are steadily improving their collection and handling of solid waste and wastewater, gradually yielding more positive outcomes for the environment.

Sustainability Environment Asia (SEA) is Malaysia's latest international trade event dedicated to environmental preservation. Focused on key areas like waste management, recycling, green environment, and technology. SEA is the regional gateway to uncovering new and innovative ways to improve the environment.

Mark your calendar on 22 - 24 November 2023 and come visit Sustainability Environment Asia (SEA) at KL Convention Centre.

*"Discover the flow towards a sustainable future at the Sustainability Environment Asia 2023. Join hands with the Singapore Water Association (SWA) as we emphasize the imperative of exhibiting and visiting this event, where innovative solutions, cutting-edge technologies, and collaborative ideas converge. Together we pave the path for a water-secure and eco-conscious tomorrow, driving change drop by drop."*
